Universal modular roofing

BROSА in Icelandic means SMILE, which combined with our slogan "a smile for rainy weather" makes happy brand of Galeco company.

The Galeco BROSА roofing system is distinguished by its aesthetic design and symmetry of embossment. Thanks to these features, BROSА metal roof tilesheets fit perfectly with both modern and conventional building designs. The product is available in two surface finishes, smooth and with a micro wave, which makes it a universal roofing in terms of style.

System advantages:

Modern and aesthetic

The timeless shape of the metal roof tilesheets was designed for versatile use on both modern and conventional buildings.

Ecology and the highest quality

The use of GreenCoatt® Crown BT steel dedicated for modular roofing manufacturing guarantees high durability and colour consistency, as well as corrosion resistance. It is coated with a biotechnological coating made of Swedish rapeseed oil instead of petroleum-derived ingredients.

Easy transport and assembly

The use of a modular form facilitates transport. The small dimensions of the panels contribute to convenient installation and make it easy to carry the panels onto the roof without the risk of deformation.

Symmetry and economy

The symmetrical panels of the system make it possible to install the tiles in any direction. This feature minimises waste and improves the economy of roofing.

Modularity and accessibility

The modular form of the sheets allows for optimal use of storage space, and also guarantees the availability of the product "from stock", without having to wait for production to order.

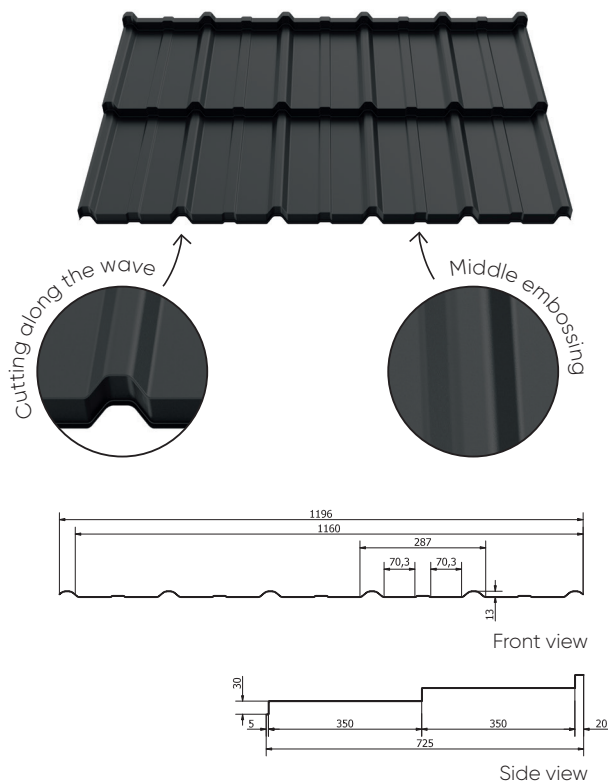

Reinforced structure

Middle embossing in the lower wave makes the profile stronger and eliminates the steel sheet waving effect.

Warranty: 40 years for technical performance, 15 years for appearance

With Galeco BROSА modular metal roof tilesheet, you can create a durable and timeless roof. A characteristic feature of the product is the central embossing, which increases the rigidity of the sheet, eliminating the phenomenon of surface waving. The symmetrical shape of the modules allows for installation in any direction of the roof slope, guaranteeing optimal use of each sheet. The symmetrical form creates a modern and easy-to-install roofing material, resistant to the passage of time and the passing of trends. The BROSА modular metal roof tilesheet line was created with the environment in mind, using Scandinavian GreenCoat® Crown BT steel. It is coated with a biotechnology-based half-matt coating made of Swedish rapeseed oil instead of petroleum-derived ingredients. The GreenCoat® Crown BT steel dedicated for modular roofing manufacturing guarantees high durability and colour consistency.

Technical data

Total height	43 mm
Embossing height	30 mm
Module length	350 mm
Total width	1196 mm
Effective width	1160 mm
Total length	725 mm
Effective area of one sheet	0,812 m ²
Weight of one panel	3,9 kg
Steel sheet thickness	0,50 mm
Zinc coating	275 g/m ²
Number of sheets on a pallet	200 pcs.
Minimum roof slope angle	9°

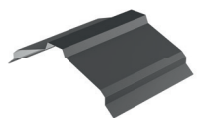

Galeco BROSА is available in the two most popular and fashionable colours.

Colours

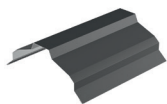

Dark semi-matt graphite, RAL 7021

Semi-matt black, RAL 9005

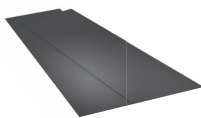

Accessories

Large ridge tilesheet
length - 2000 mm
width ~ 313 mm

Small ridge tilesheet
length - 2000 mm
width ~ 217 mm

Flat sheet with
protective film:
1250 x 2000 mm

Galeco roofing
membrane

Farmer screws
